

Direct Purchase Guide

1 Prepare Your Crypto Wallet

To begin, you'll need an Ethereum-compatible wallet. We recommend:

- [MetaMask](#)
- [Trust Wallet](#)

Set up your wallet and **securely save your 12-word recovery phrase** — it's the only way to restore access if you ever lose access to your device.

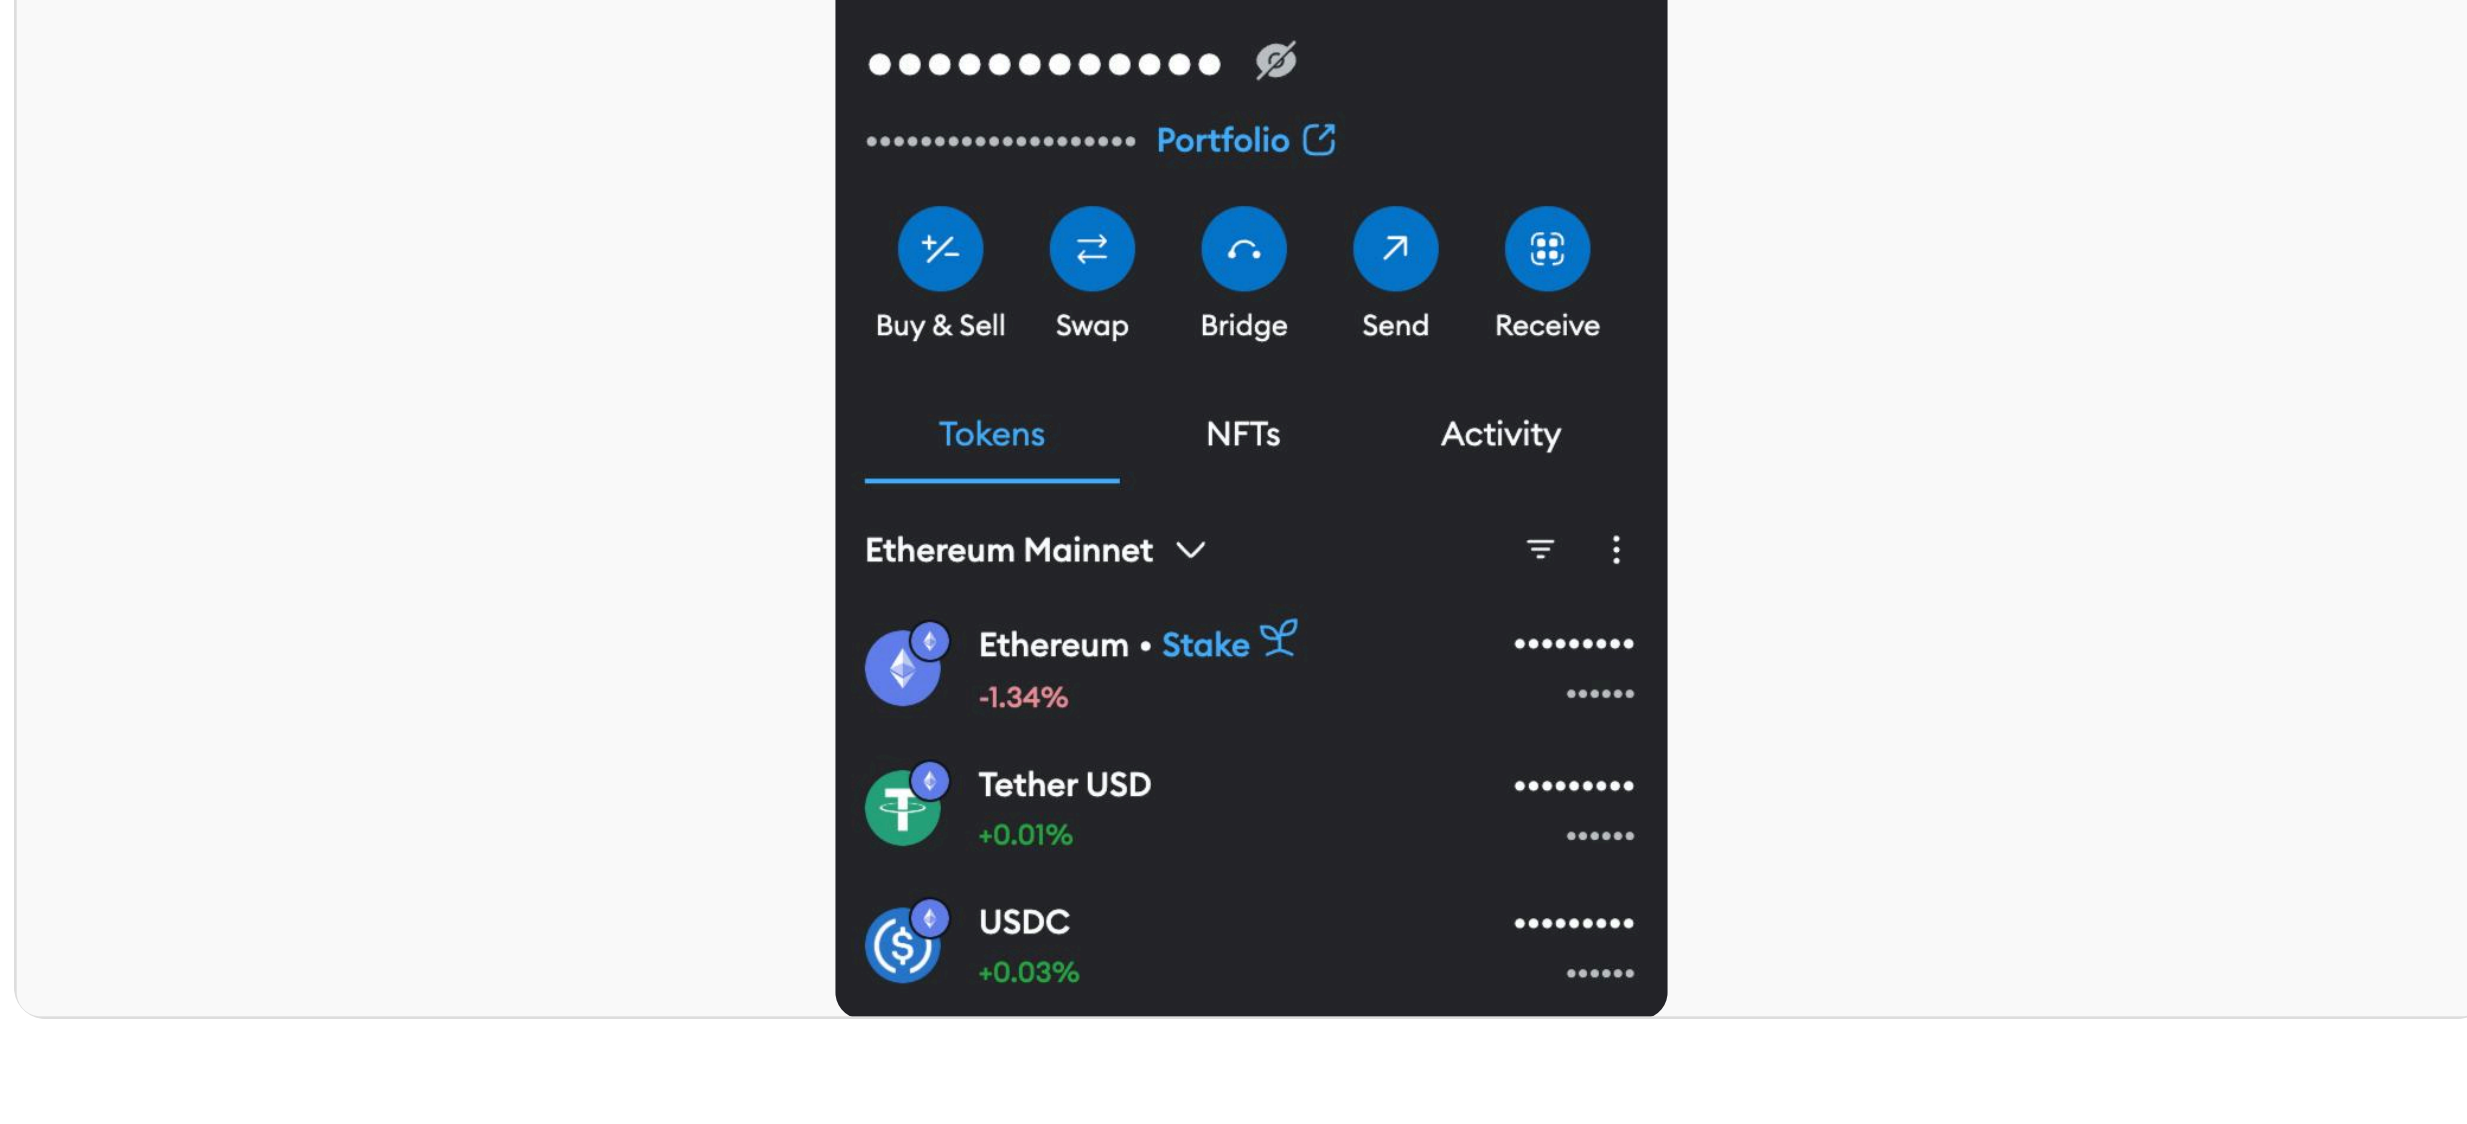

2 Fund Your Wallet

To complete a purchase, your wallet must hold two tokens on the **Ethereum mainnet**:

- **USDC** - used for the purchase itself. Make sure you have more than the asset's price to cover the storage fee for a century.
- **ETH** – used for transaction (gas) fees

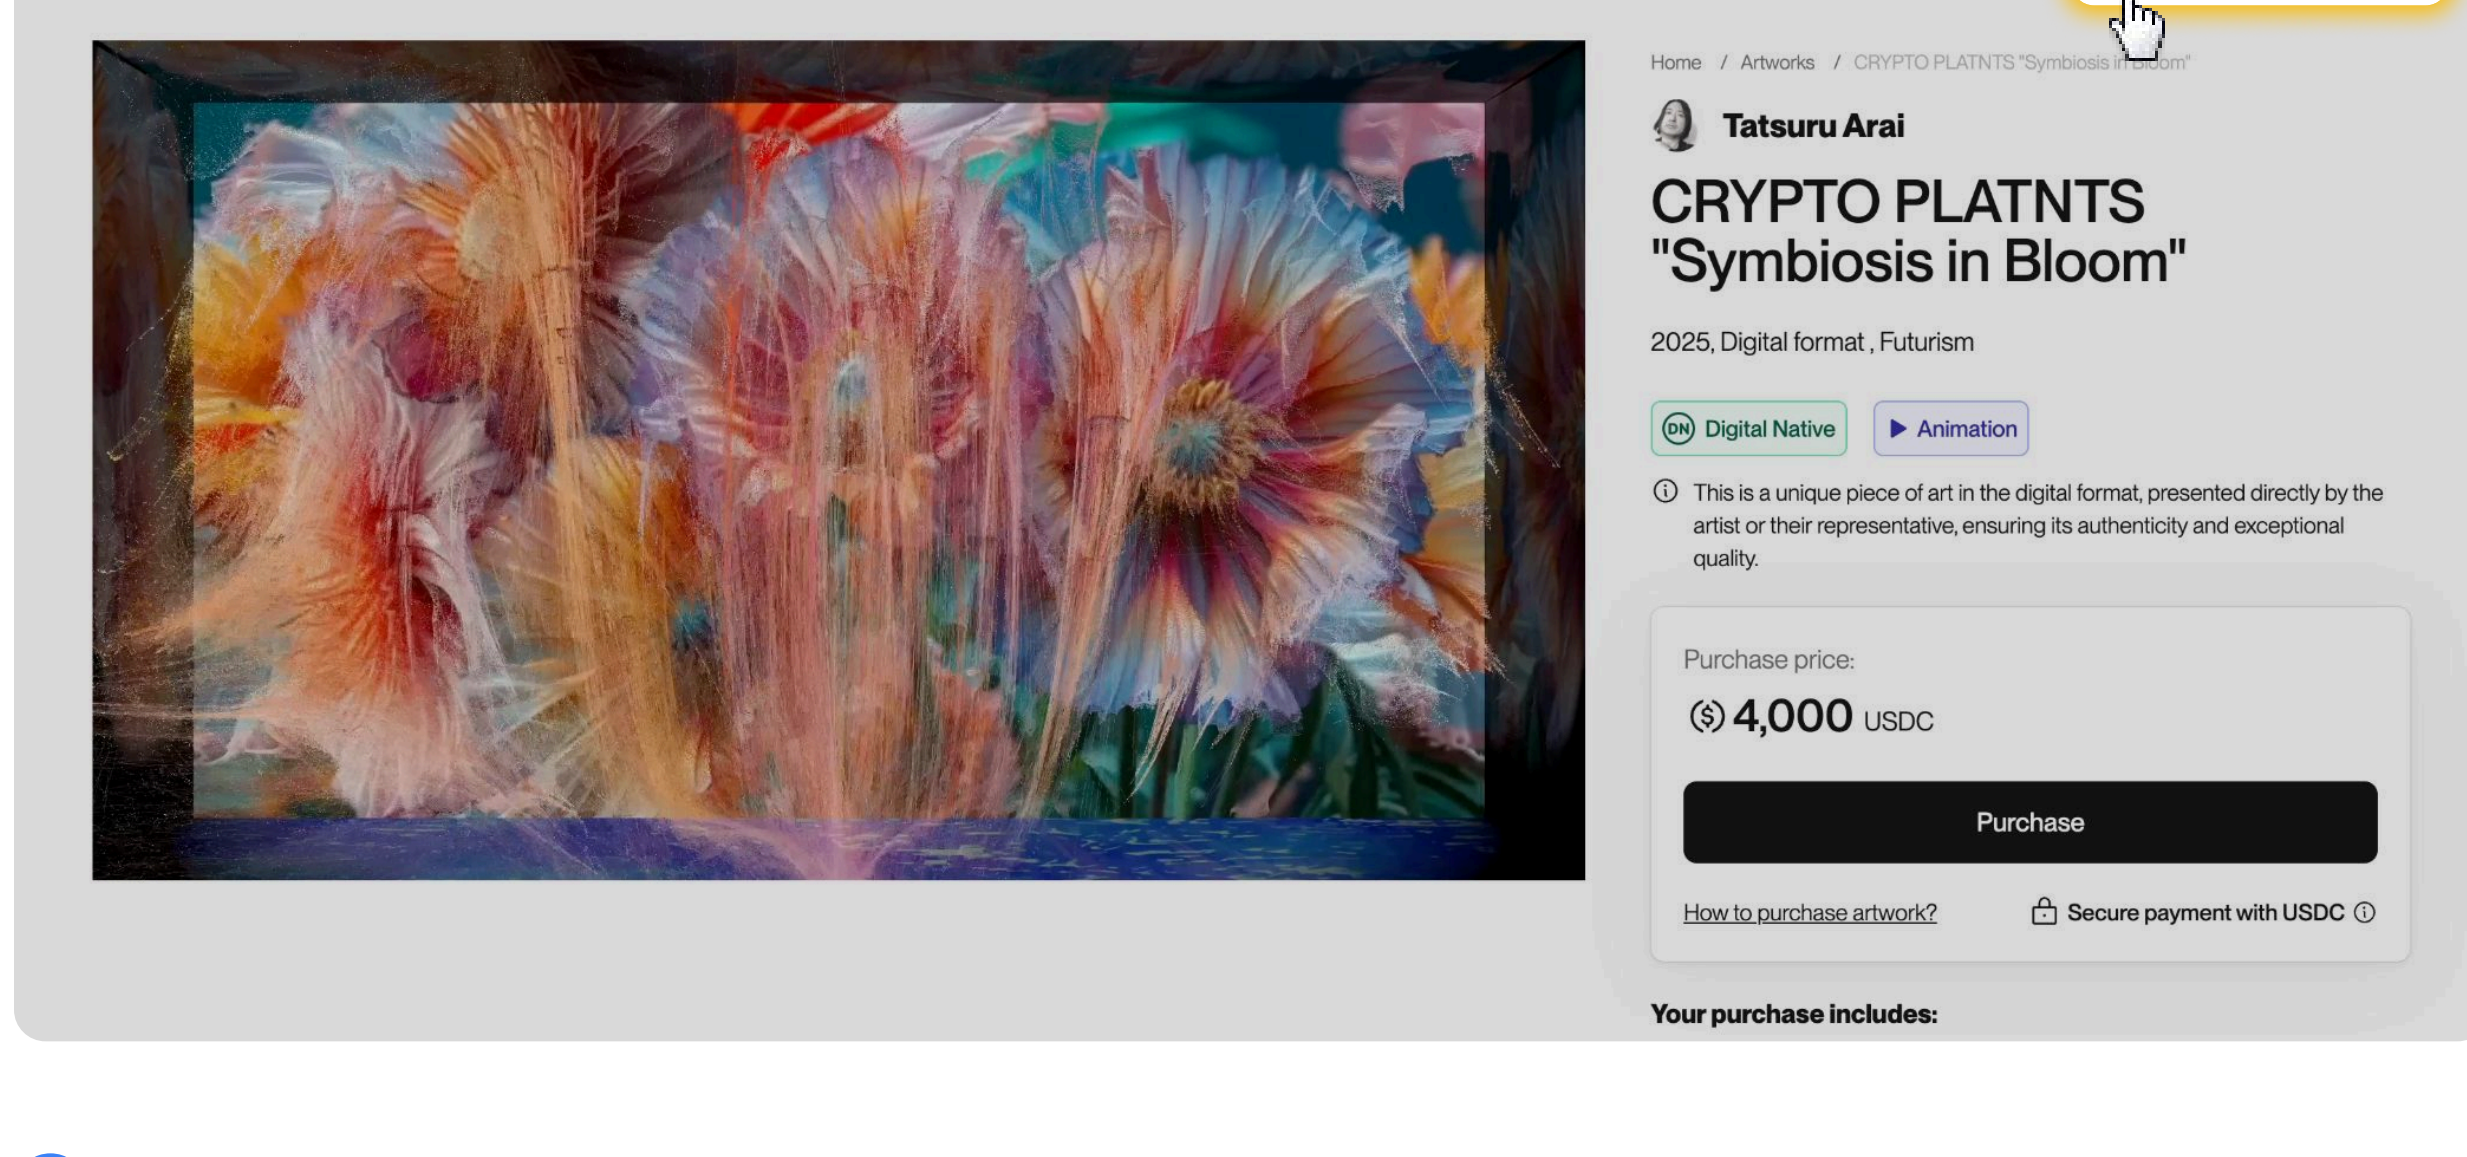

If you use MetaMask, you can add both tokens and fund your wallet **directly from the app**. If you use another wallet, you can buy tokens on any exchange of your choice, then transfer them to your wallet on the Ethereum network.

3 Connect Your Wallet

Once your wallet is funded:

1. Click **“Connect Wallet”** at the top of the site.
2. Approve the connection in your wallet interface (e.g., MetaMask popup).
3. Make sure you're connected to the **Ethereum Mainnet**.

4 Browse & Select Artwork

Browse available assets and select any one you'd like to purchase.

Click on any artwork to open its detail page and review key information:

- Artist name & description
- Asset type (Digital Original / Digital Native)
- Price in USDC

Once you've reviewed the artwork details and ensured your wallet is connected and funded, you can proceed with the purchase from this page.

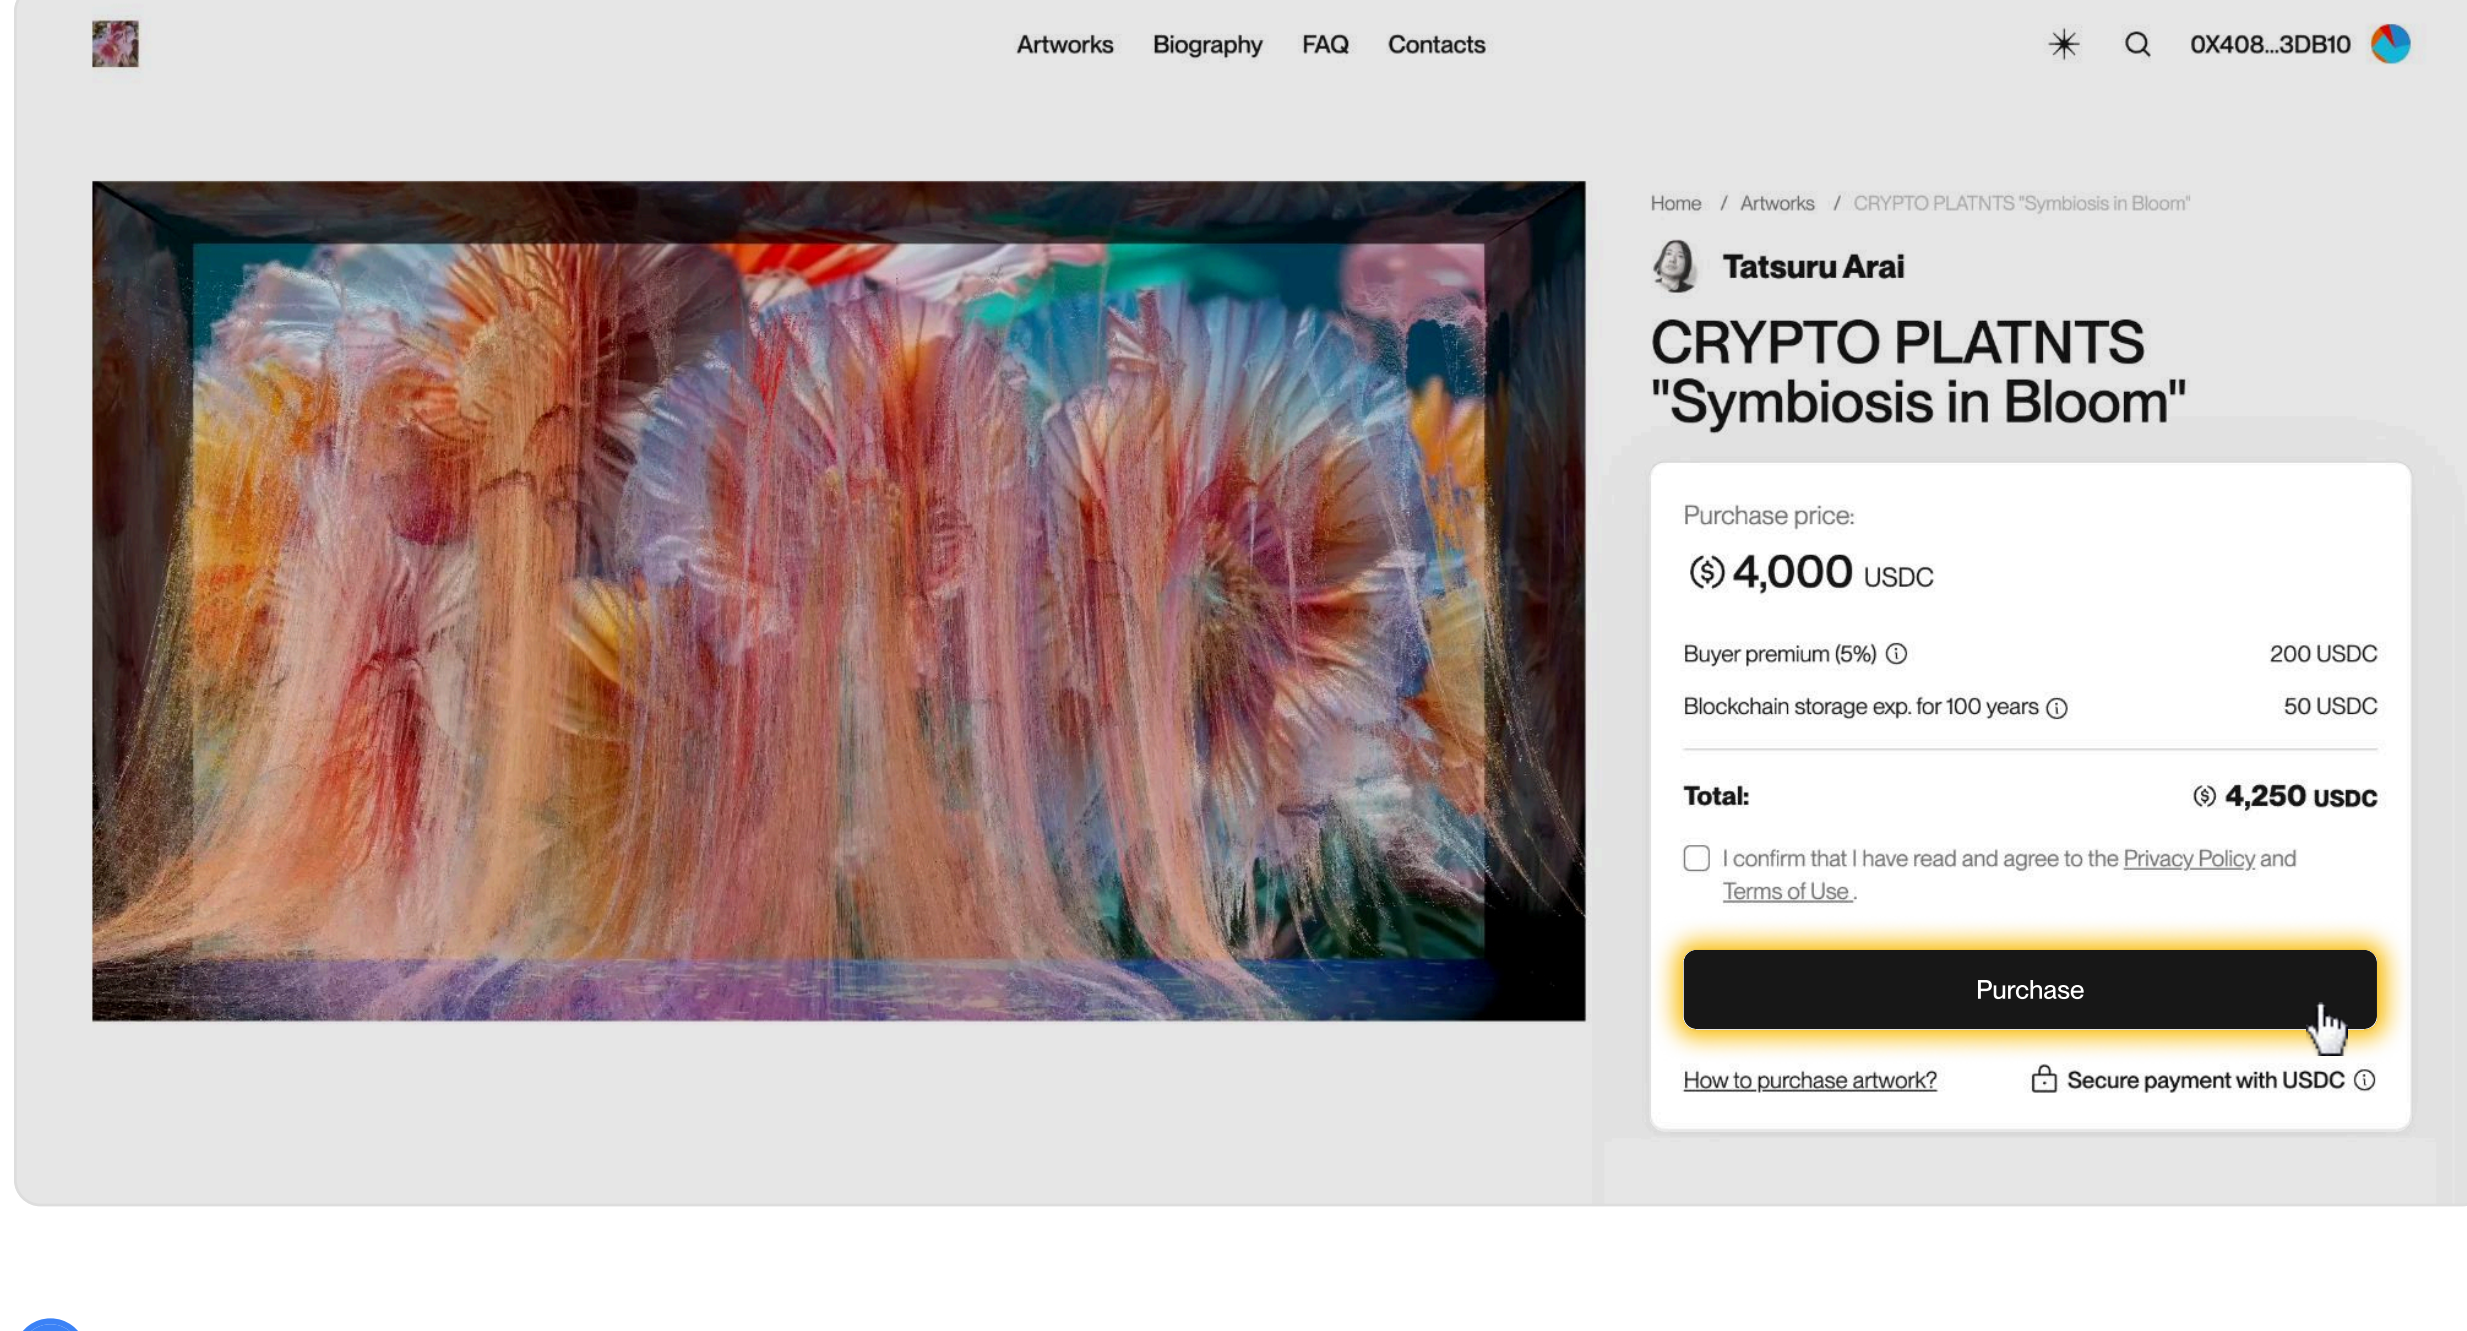

5 Confirm the Purchase

On the artwork page, click “Purchase” to start the transaction.

- A confirmation window will display the total in **USDC** (including any applicable storage fees).
- Your wallet (e.g. MetaMask) will open with the transaction details.
- **Review the amount** and **confirm** the transaction to approve payment in USDC and gas fee in ETH.

Once approved, your purchase will be submitted to the blockchain.

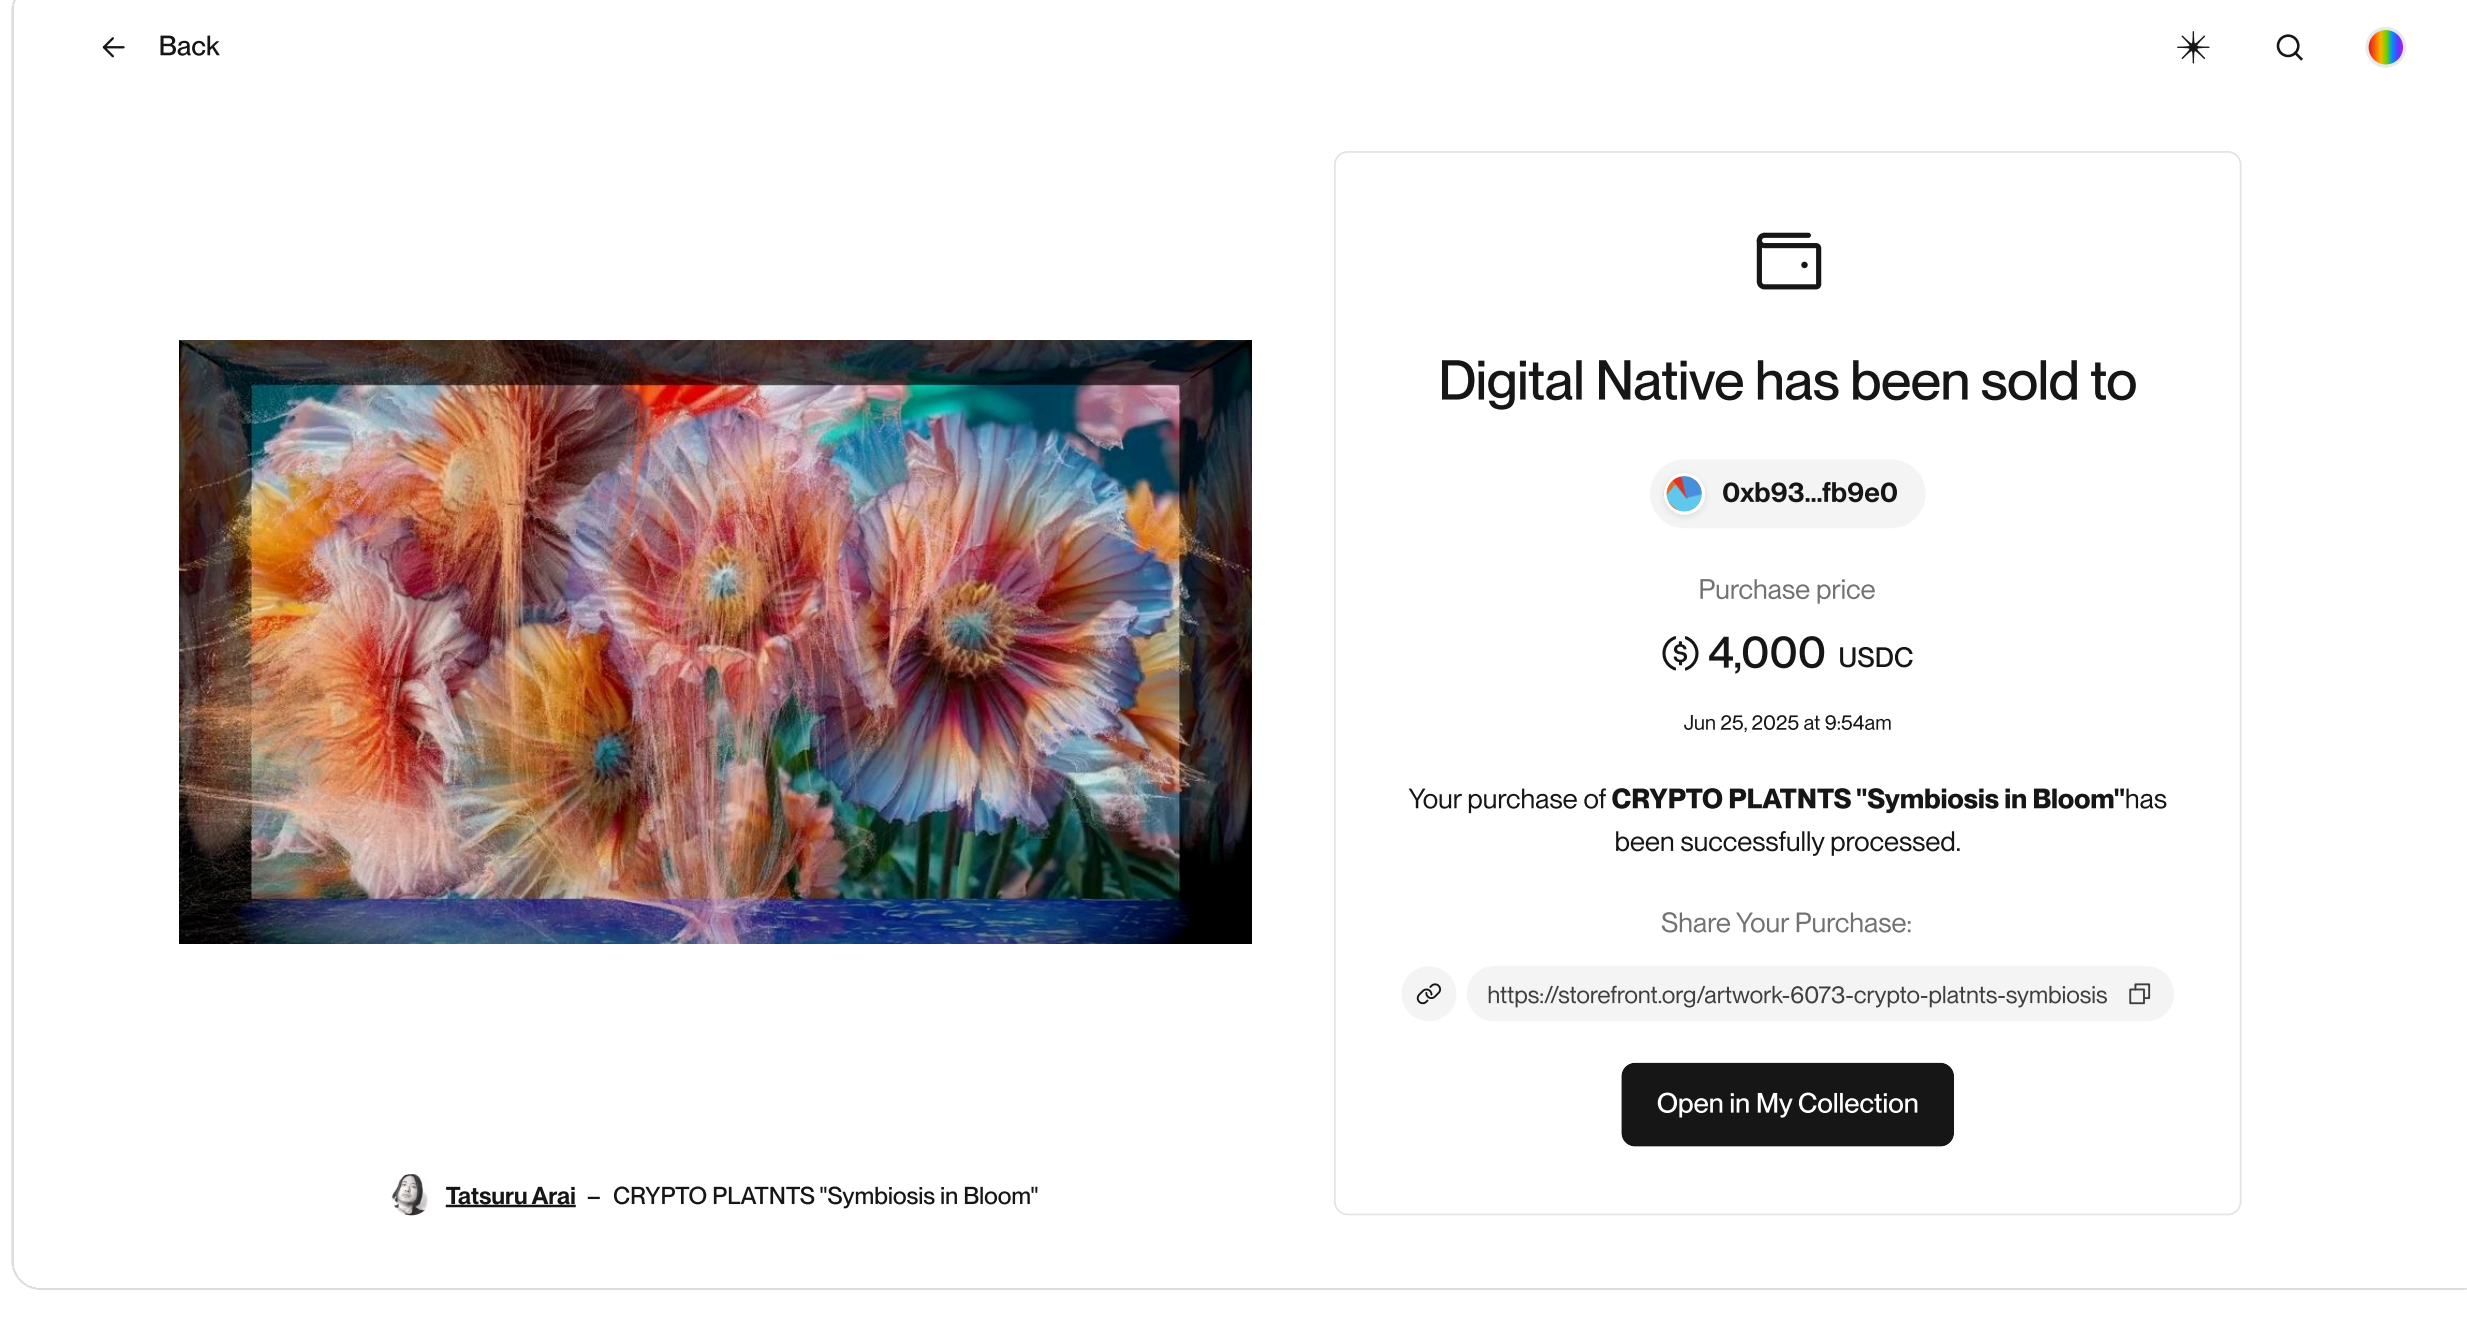

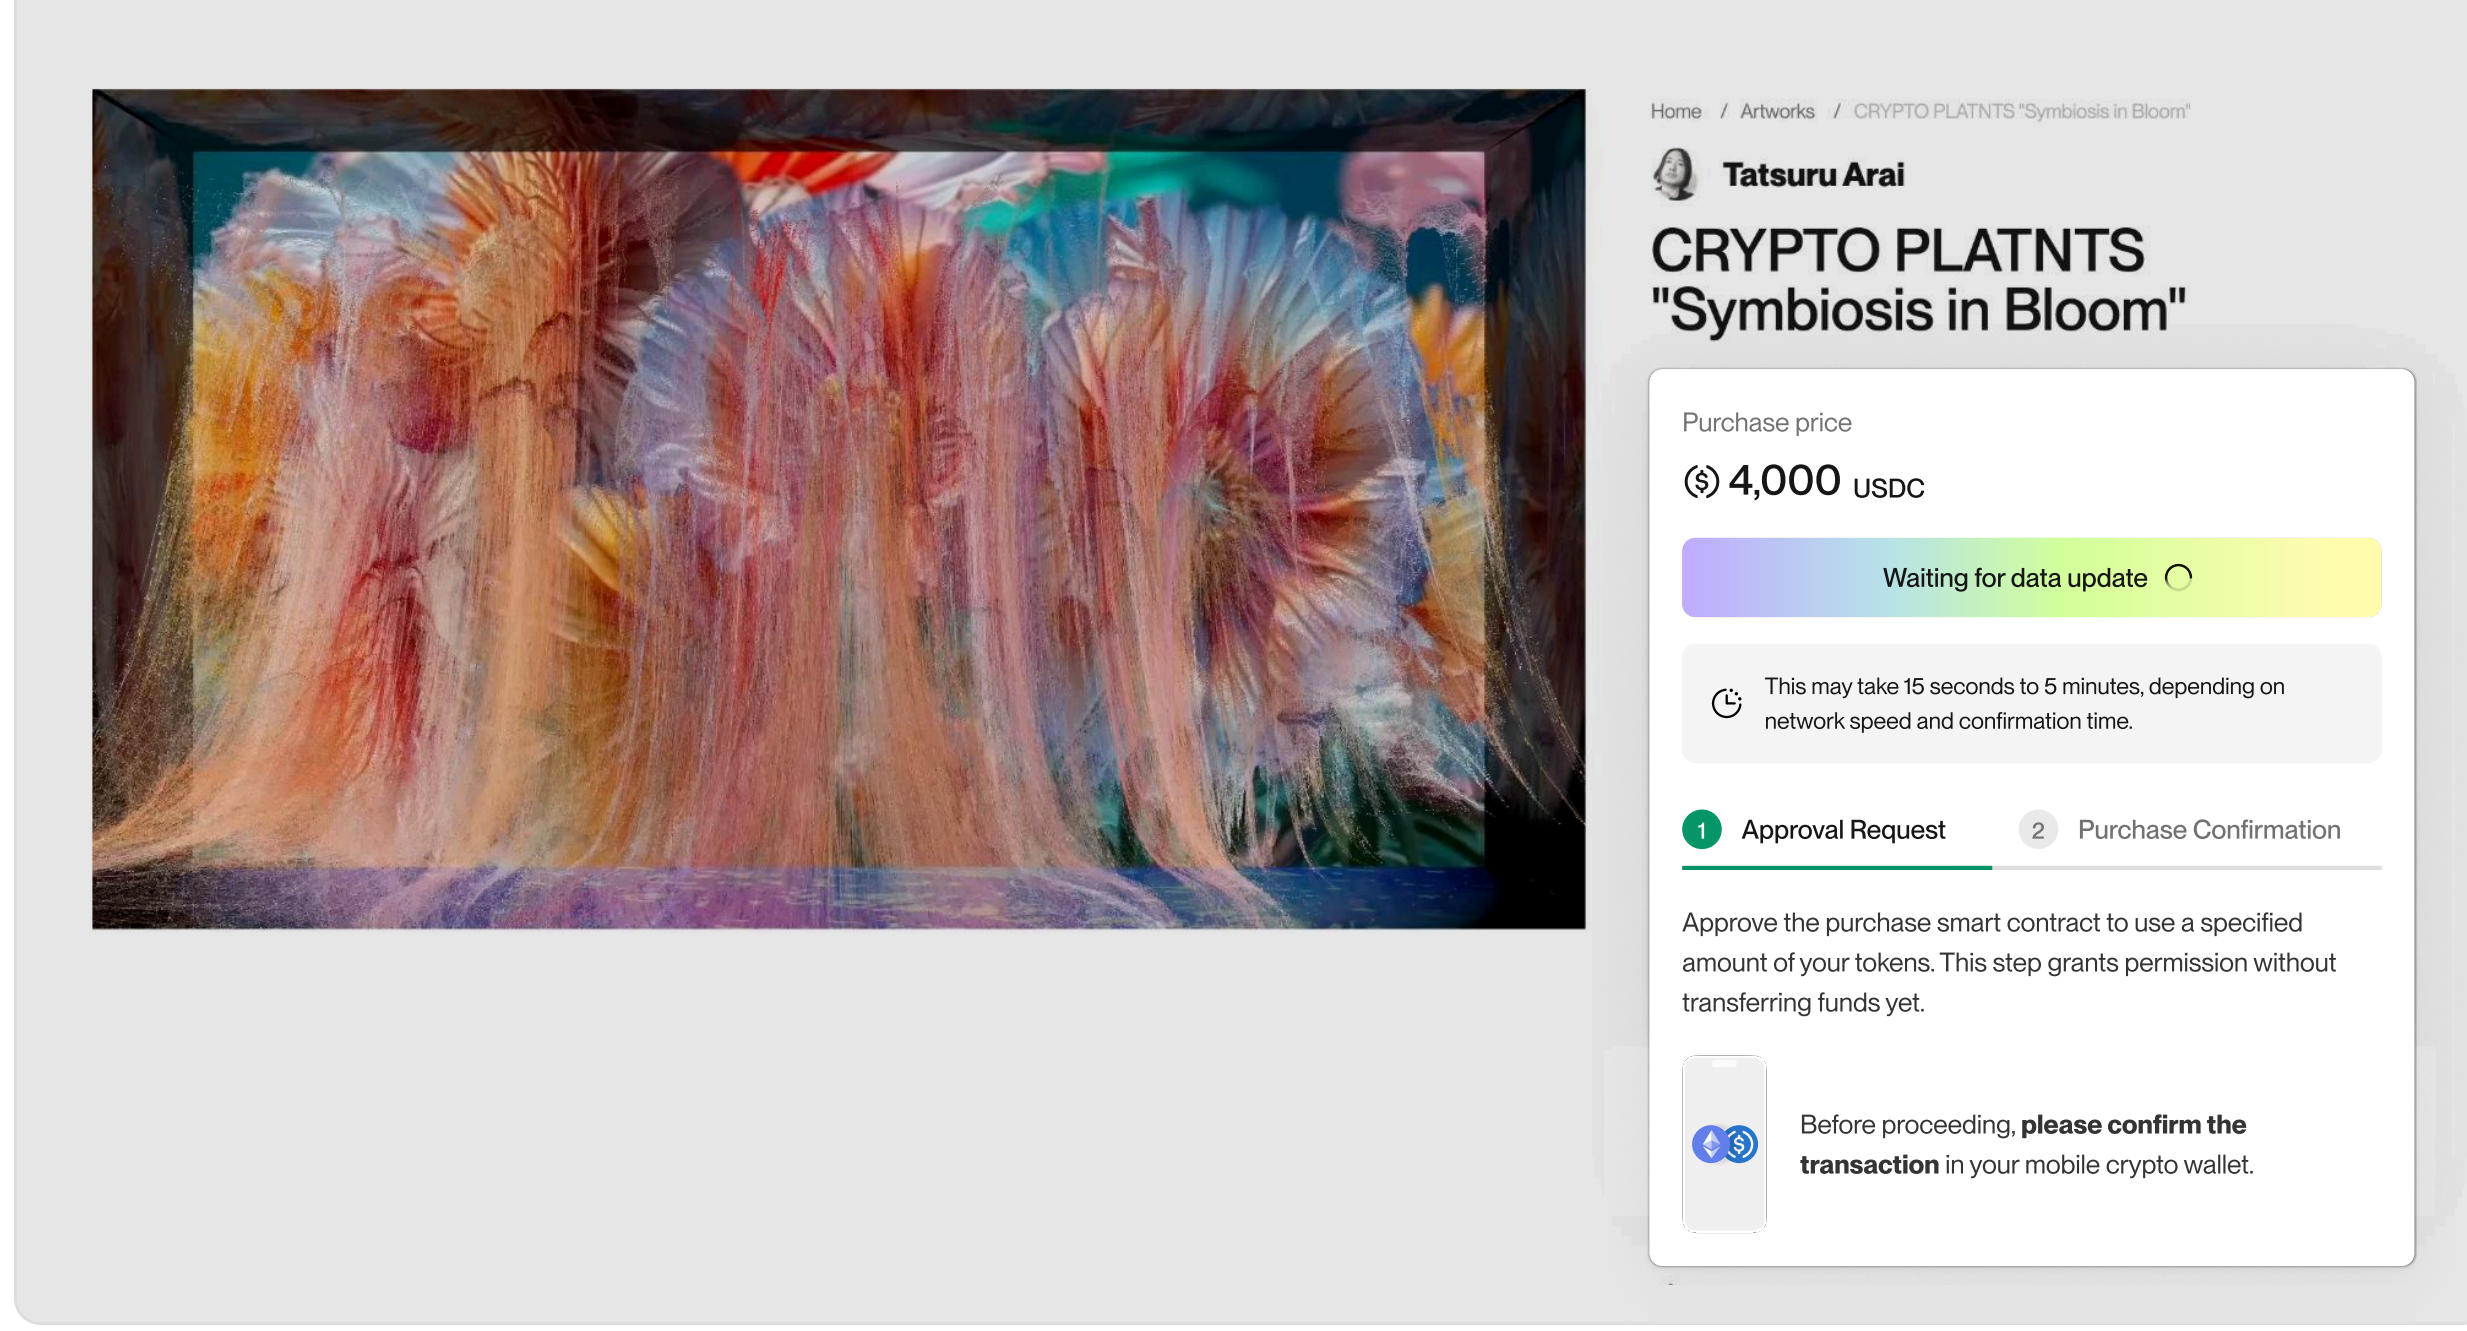

6 Wait for Blockchain Confirmation

After confirming the payment, your transaction is sent to the Ethereum network.

- Confirmation usually takes **a few seconds to a few minutes**.
- You'll see a **“Pending”** status while it's processing.
- Once confirmed, ownership of the asset is transferred to your wallet.
- The required **USDC** (including the storage fee) will be deducted.
- You may see a success message or status update on the page.

✓ That's it — the artwork is now yours.

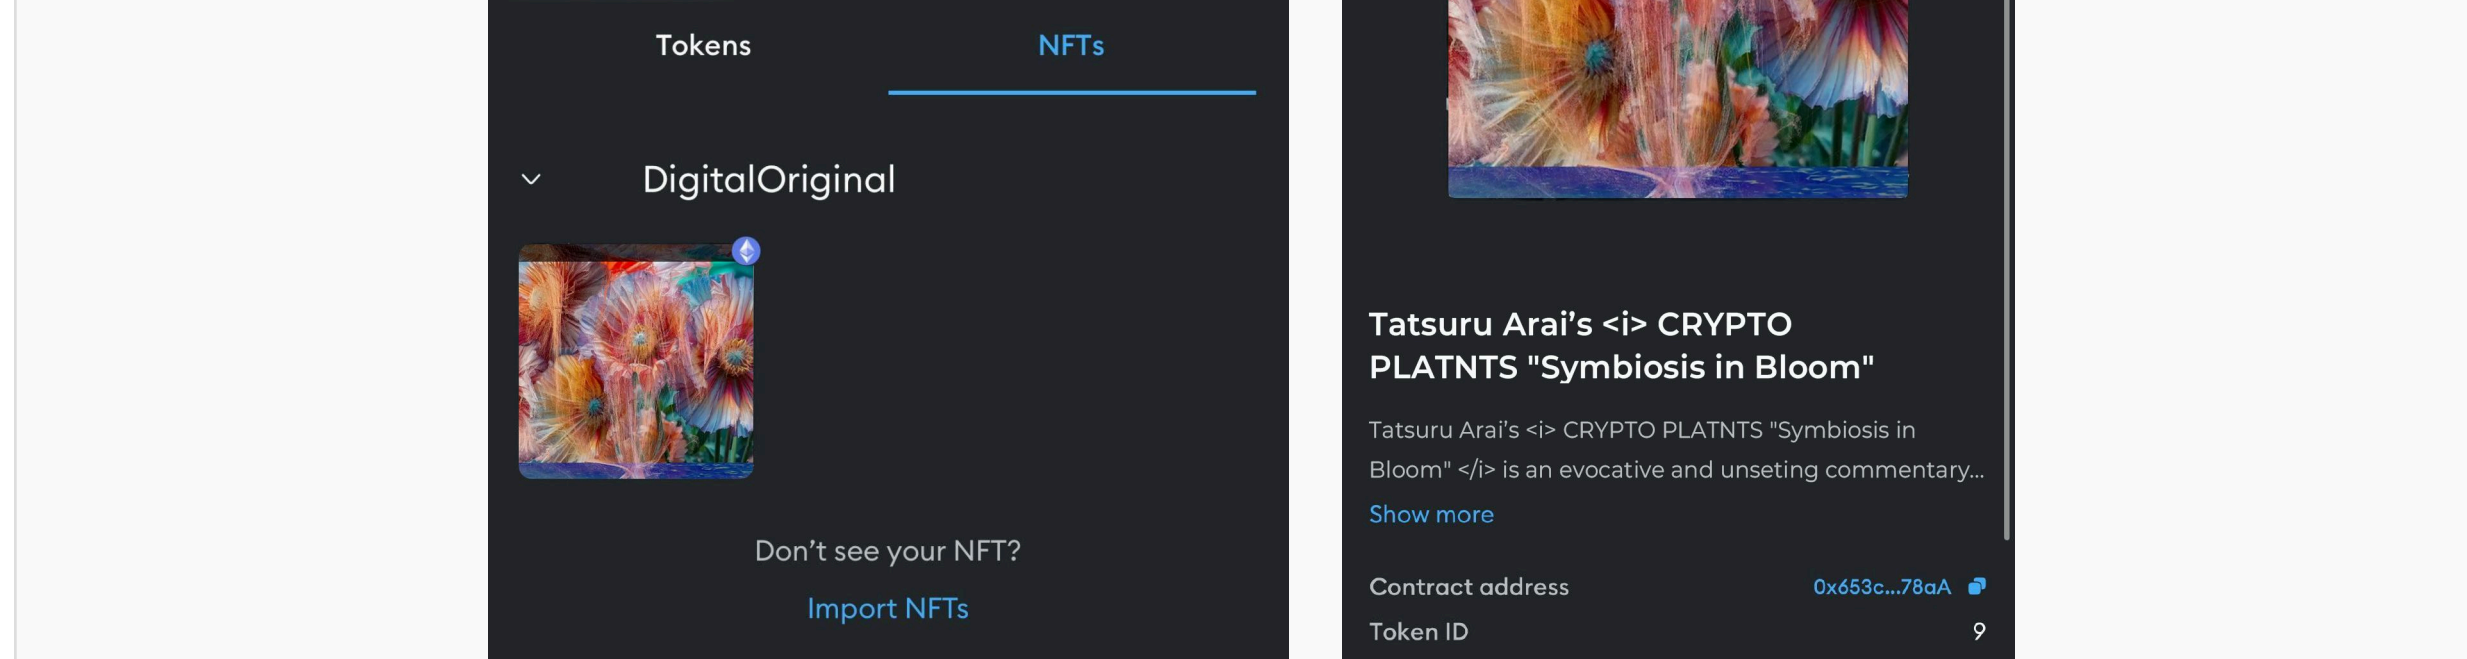

7 View and Manage Your Asset

Once the transaction is confirmed, you officially own the digital artwork.

- **On the platform:** Go to **My Collection** to see your purchased asset.
- **In your wallet:** Open the **NFTs** or **Collectibles** tab. If it's not visible, use **Import Token** and enter the contract address + token ID.

You can now hold, display, or transfer the asset.
