

# How to buy USDC on an exchange

## 1 Choose an Exchange

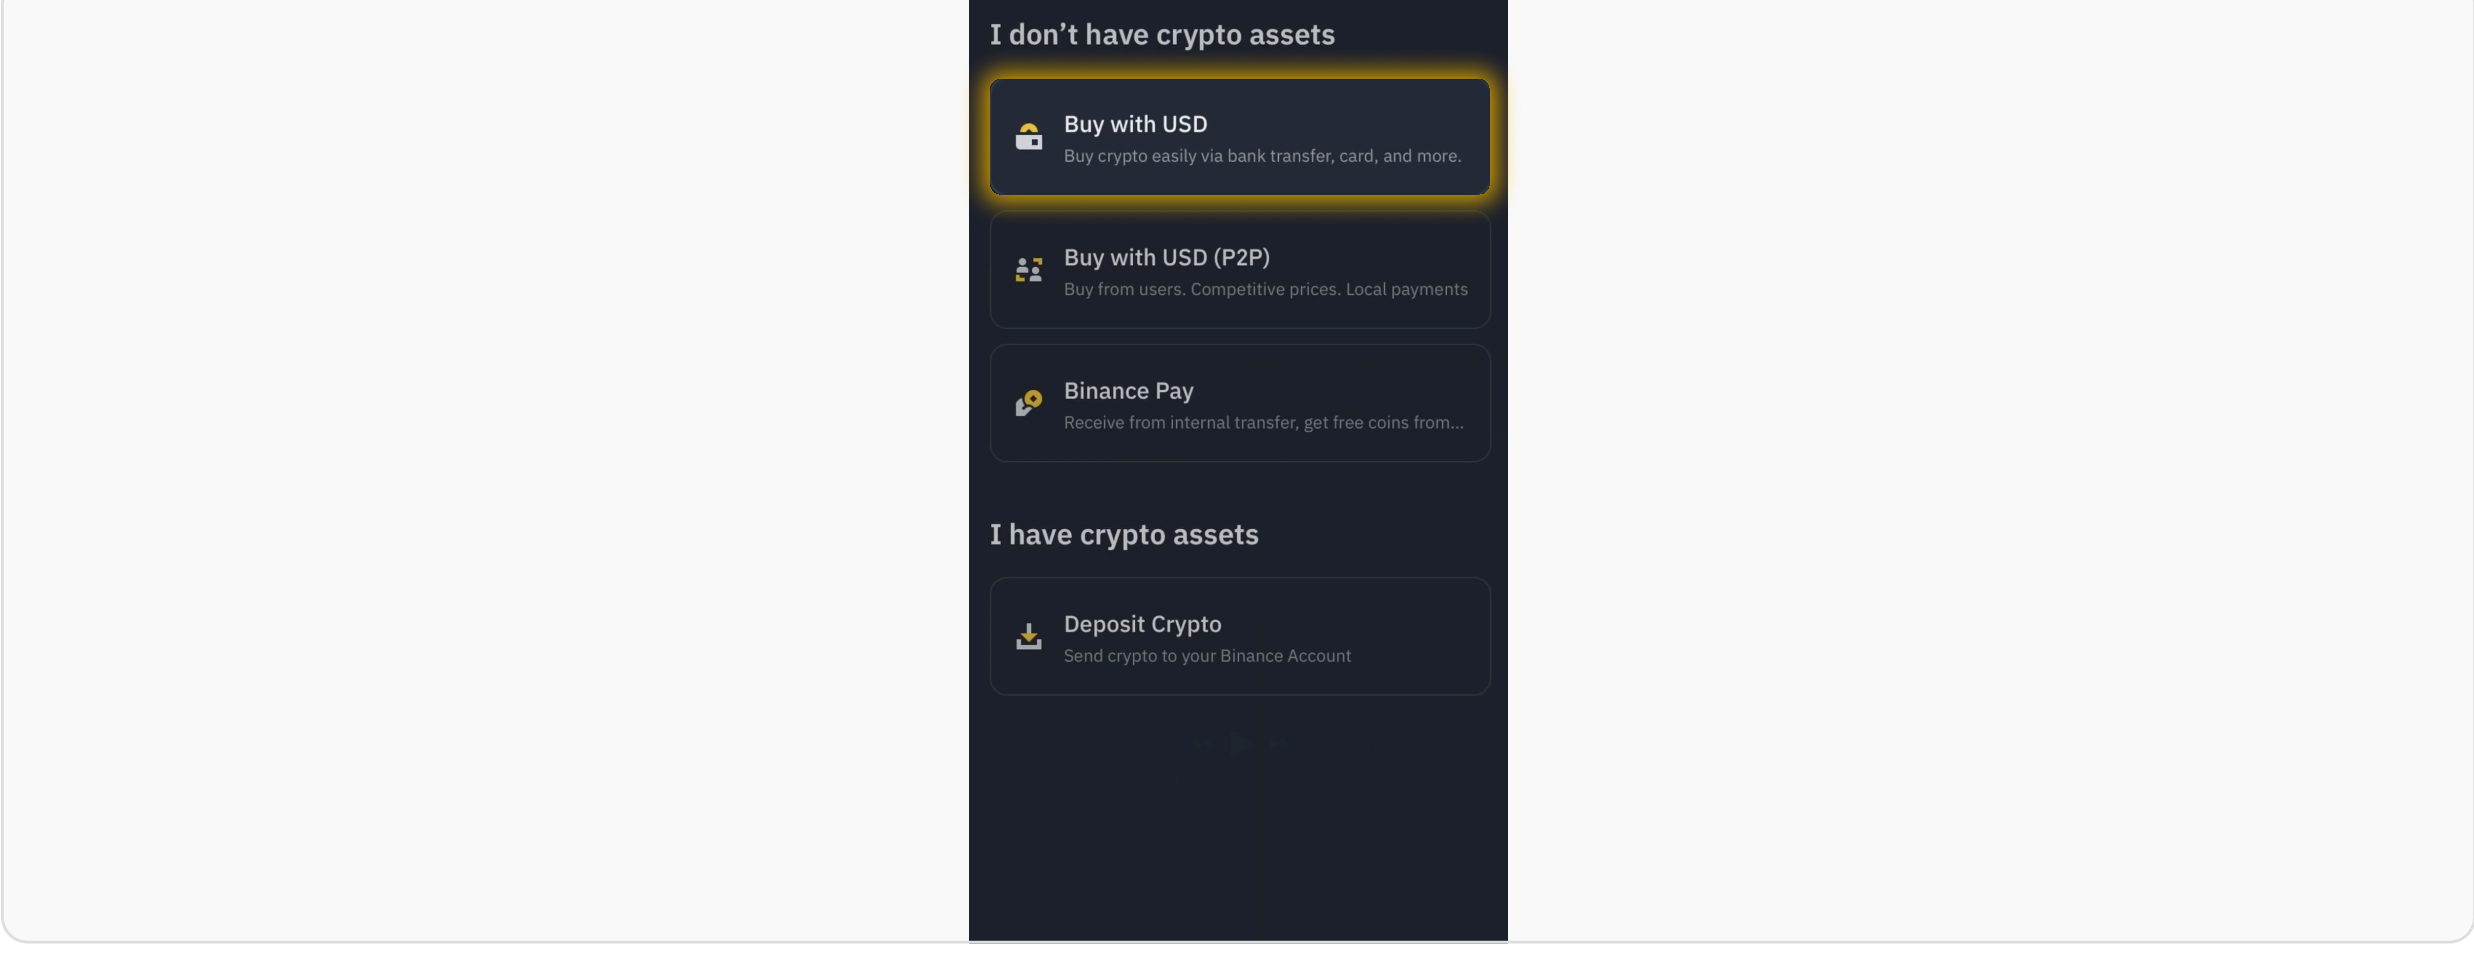

Use a trusted exchange like **Binance**, **Bybit**, or **WhiteBIT**.  
We'll use **Binance** for this example.

## 2 Go to Quick Funds

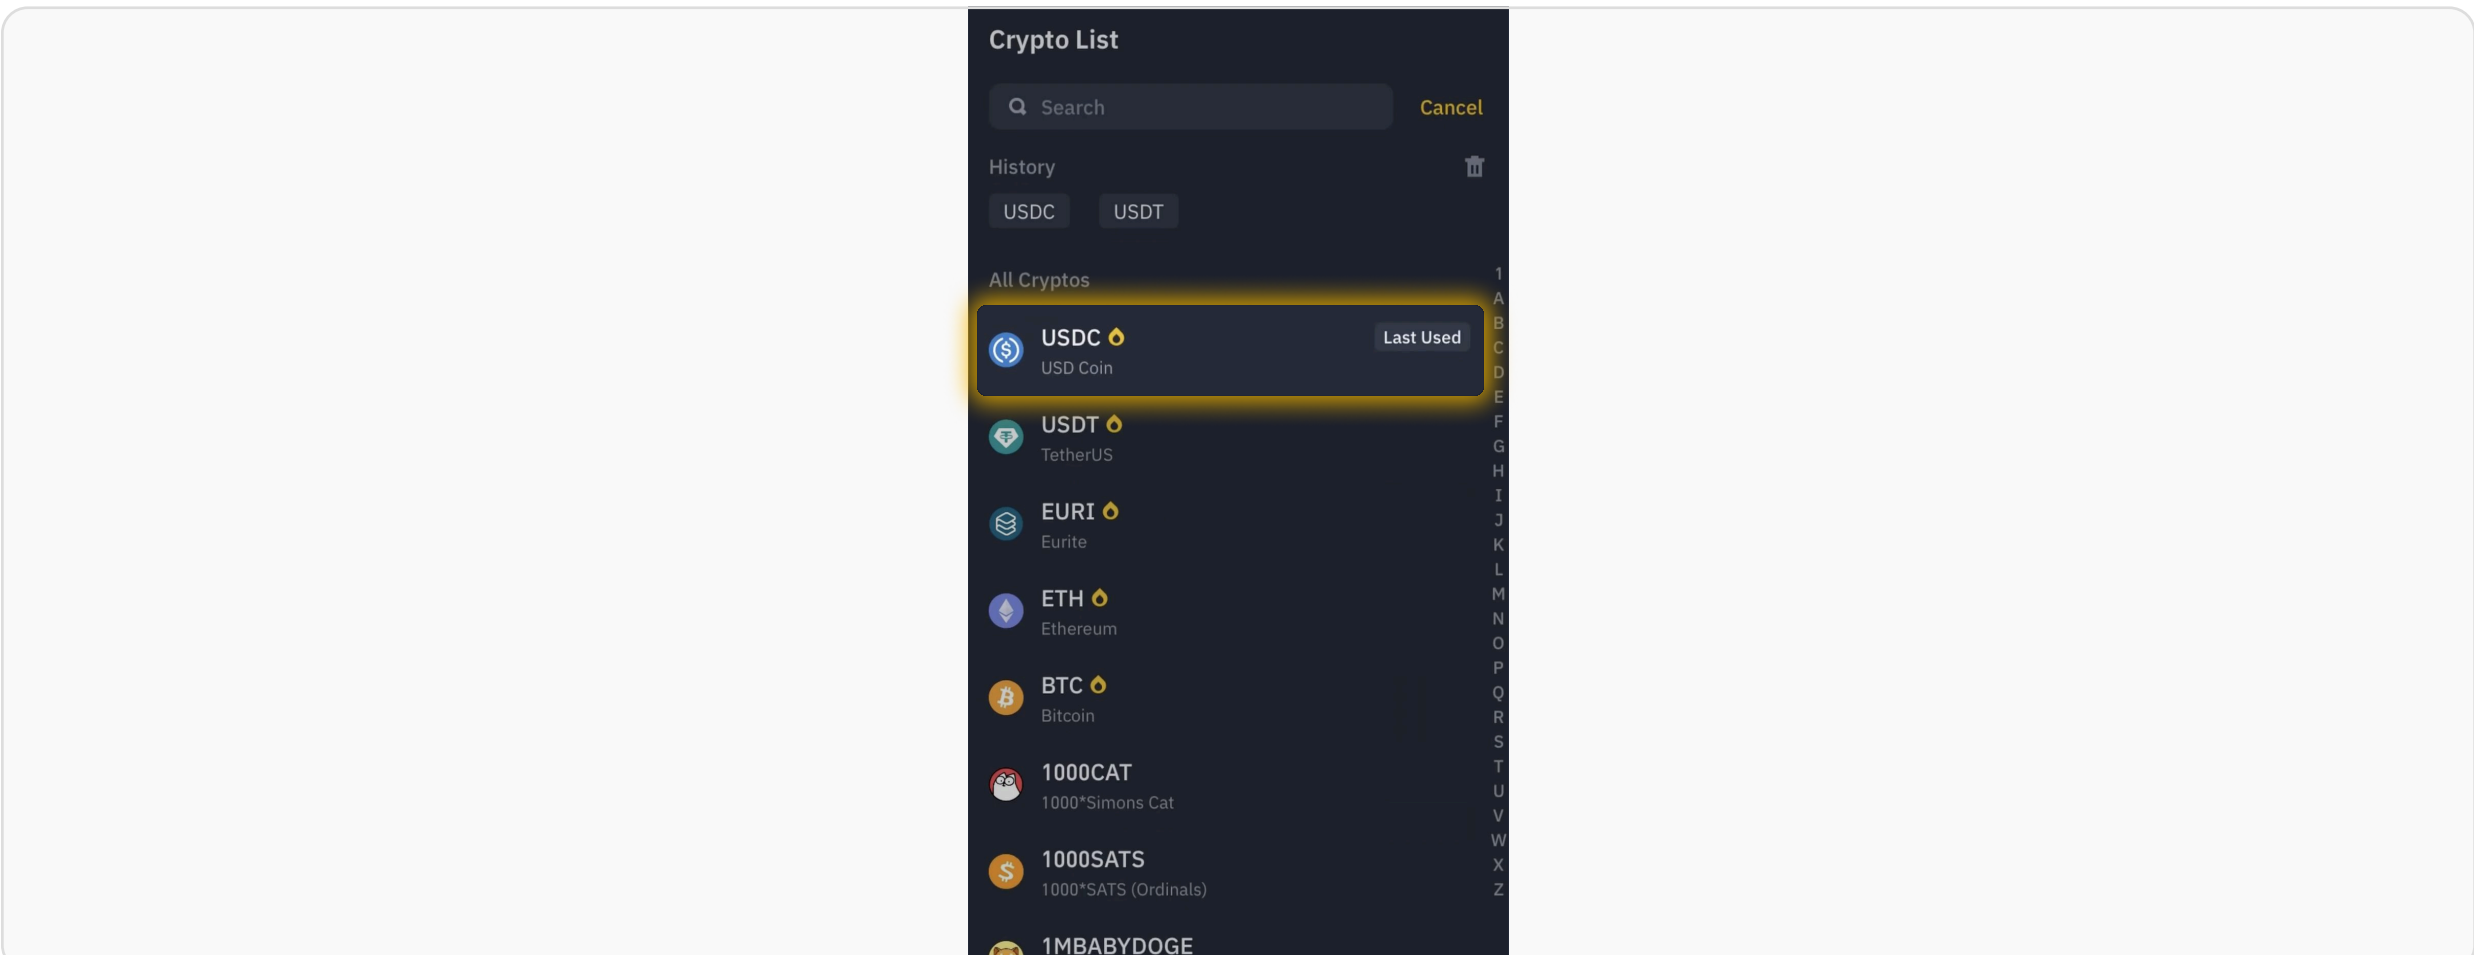

Once logged into your exchange account:

- On the **home screen**, click “**Quick Funds**”
- Select “**Buy with USD**”

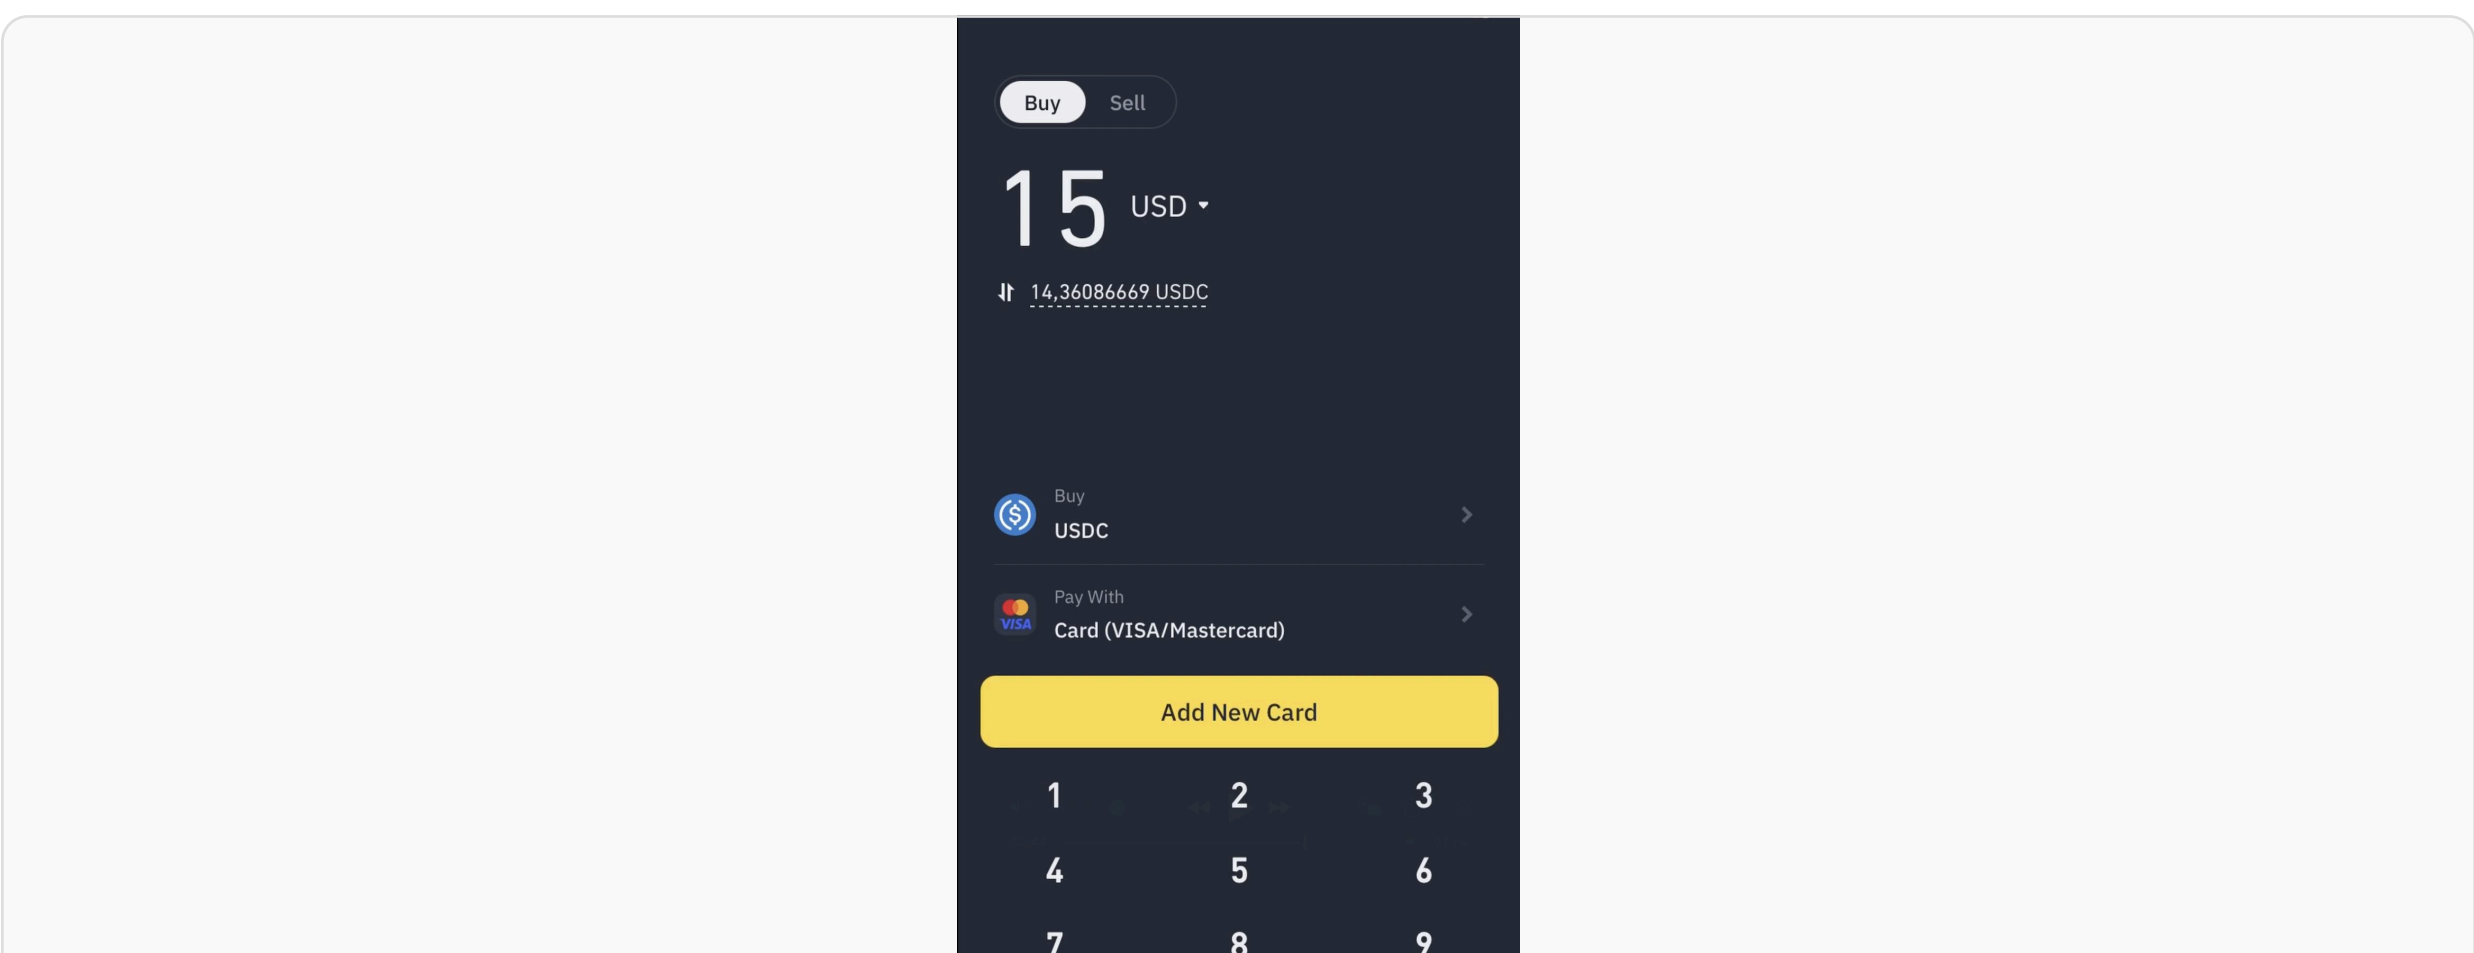

## 3 Select USDC

- In the token dropdown, choose **USDC** (USD Coin)
- Enter the amount you want to buy (in your local currency or USD)

## 4 Add Your Card Details

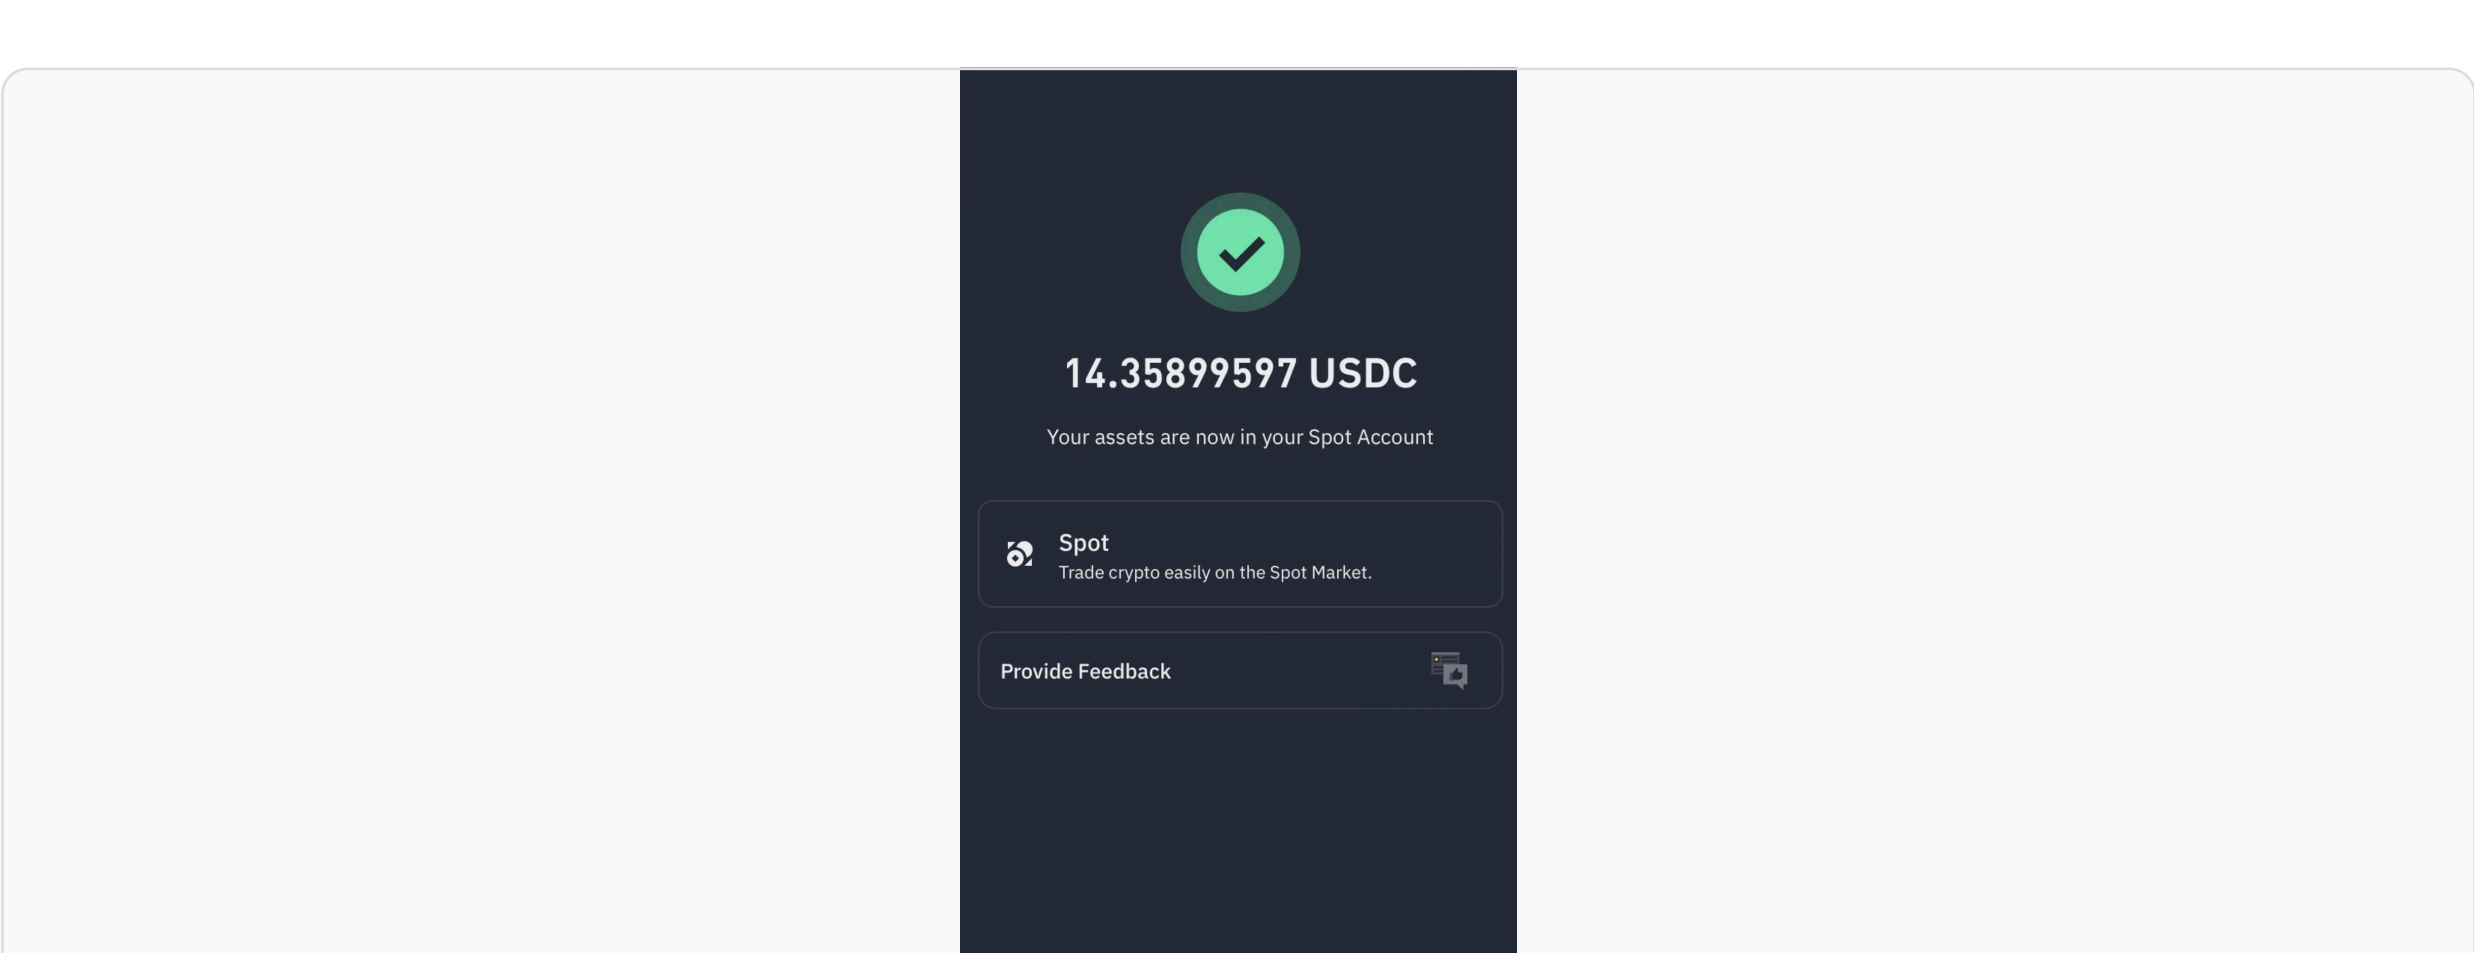

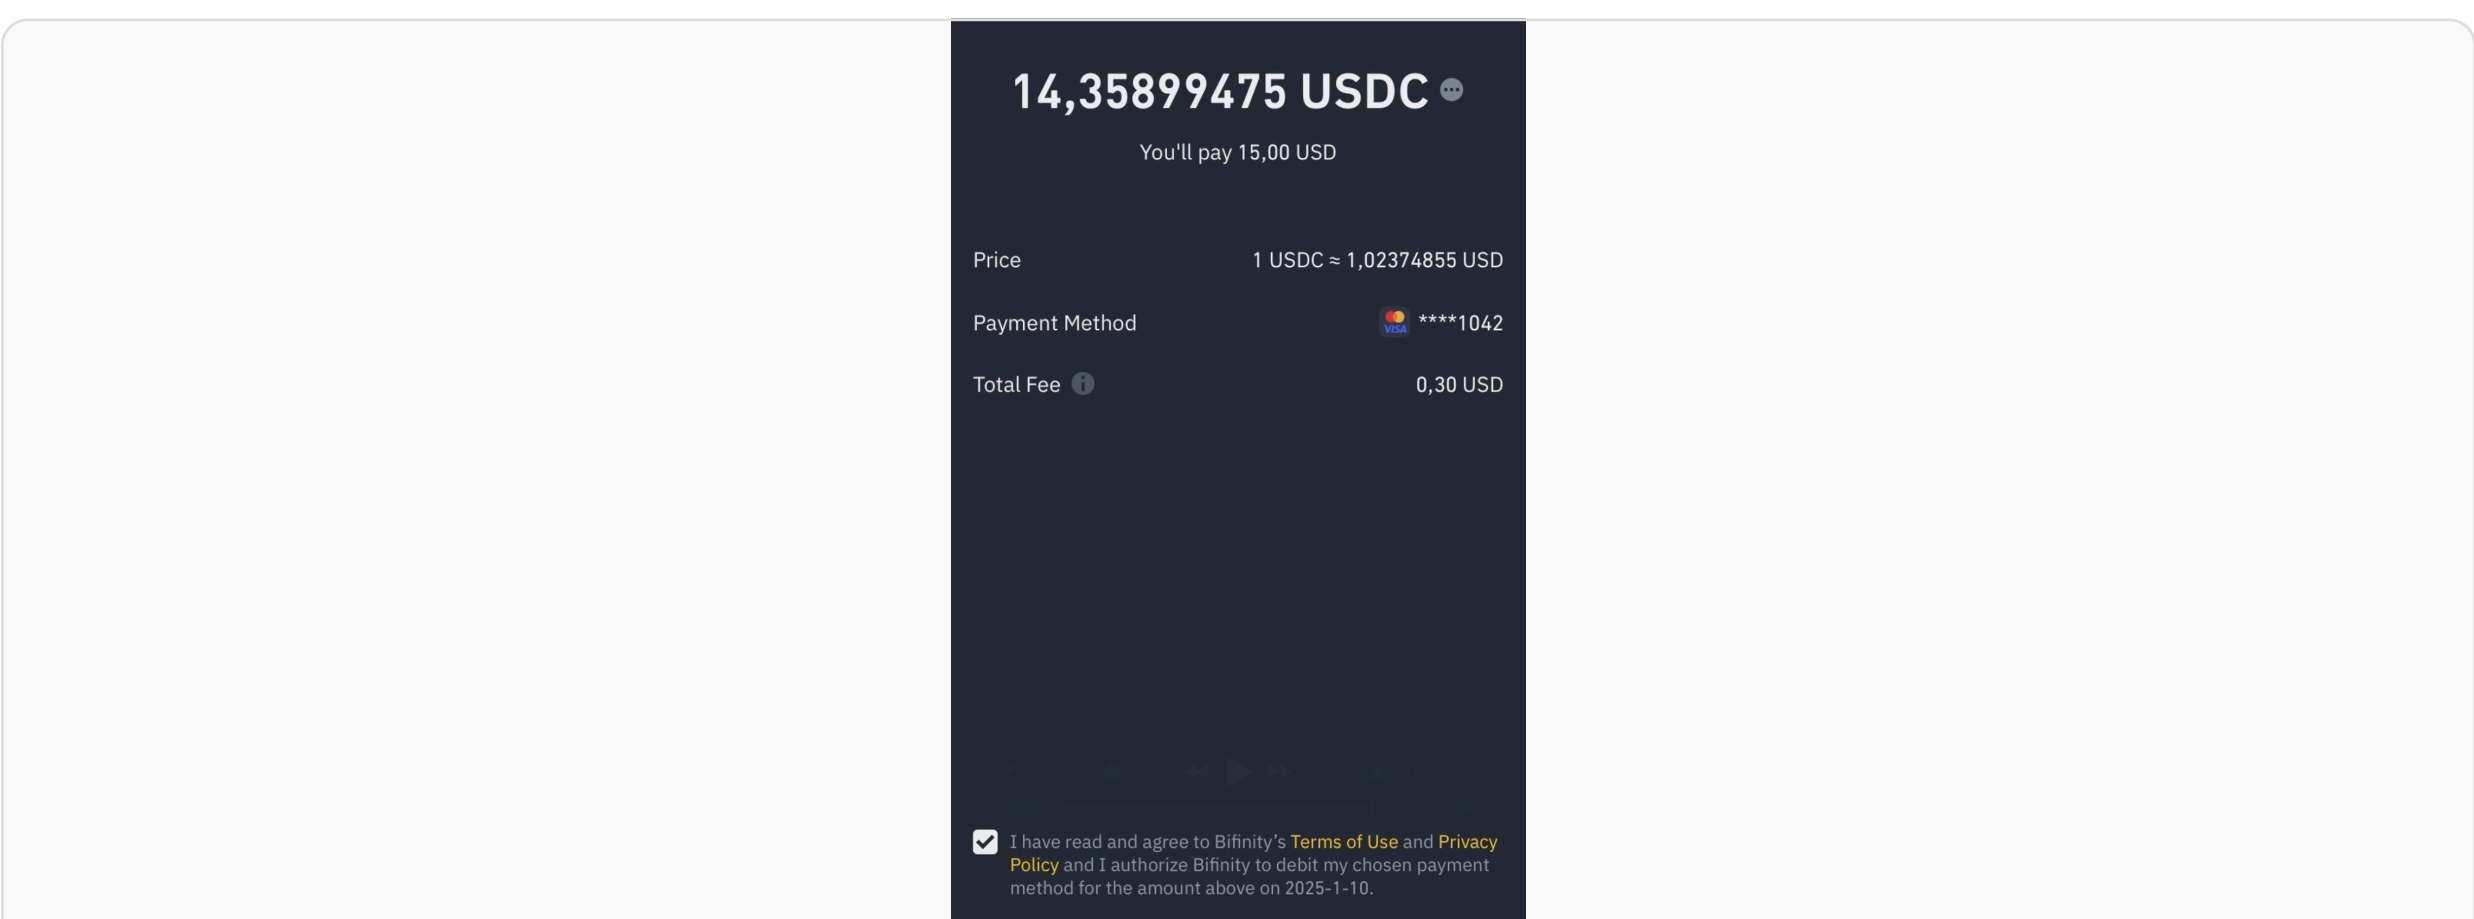

- Click “**Add New Card**”
- Enter your **card number**, **expiration date**, and **CVV code**
- Confirm your billing details (name, address, etc.)

## 5 Confirm the Payment

- Double-check the amount and token
- Click “**Confirm**” or “**Buy Now**”
- Complete any additional security checks required by your bank

✓ You’ve successfully purchased USDC on the exchange.  
You can now transfer the USDC to your crypto wallet (e.g., MetaMask) using the Withdraw function.

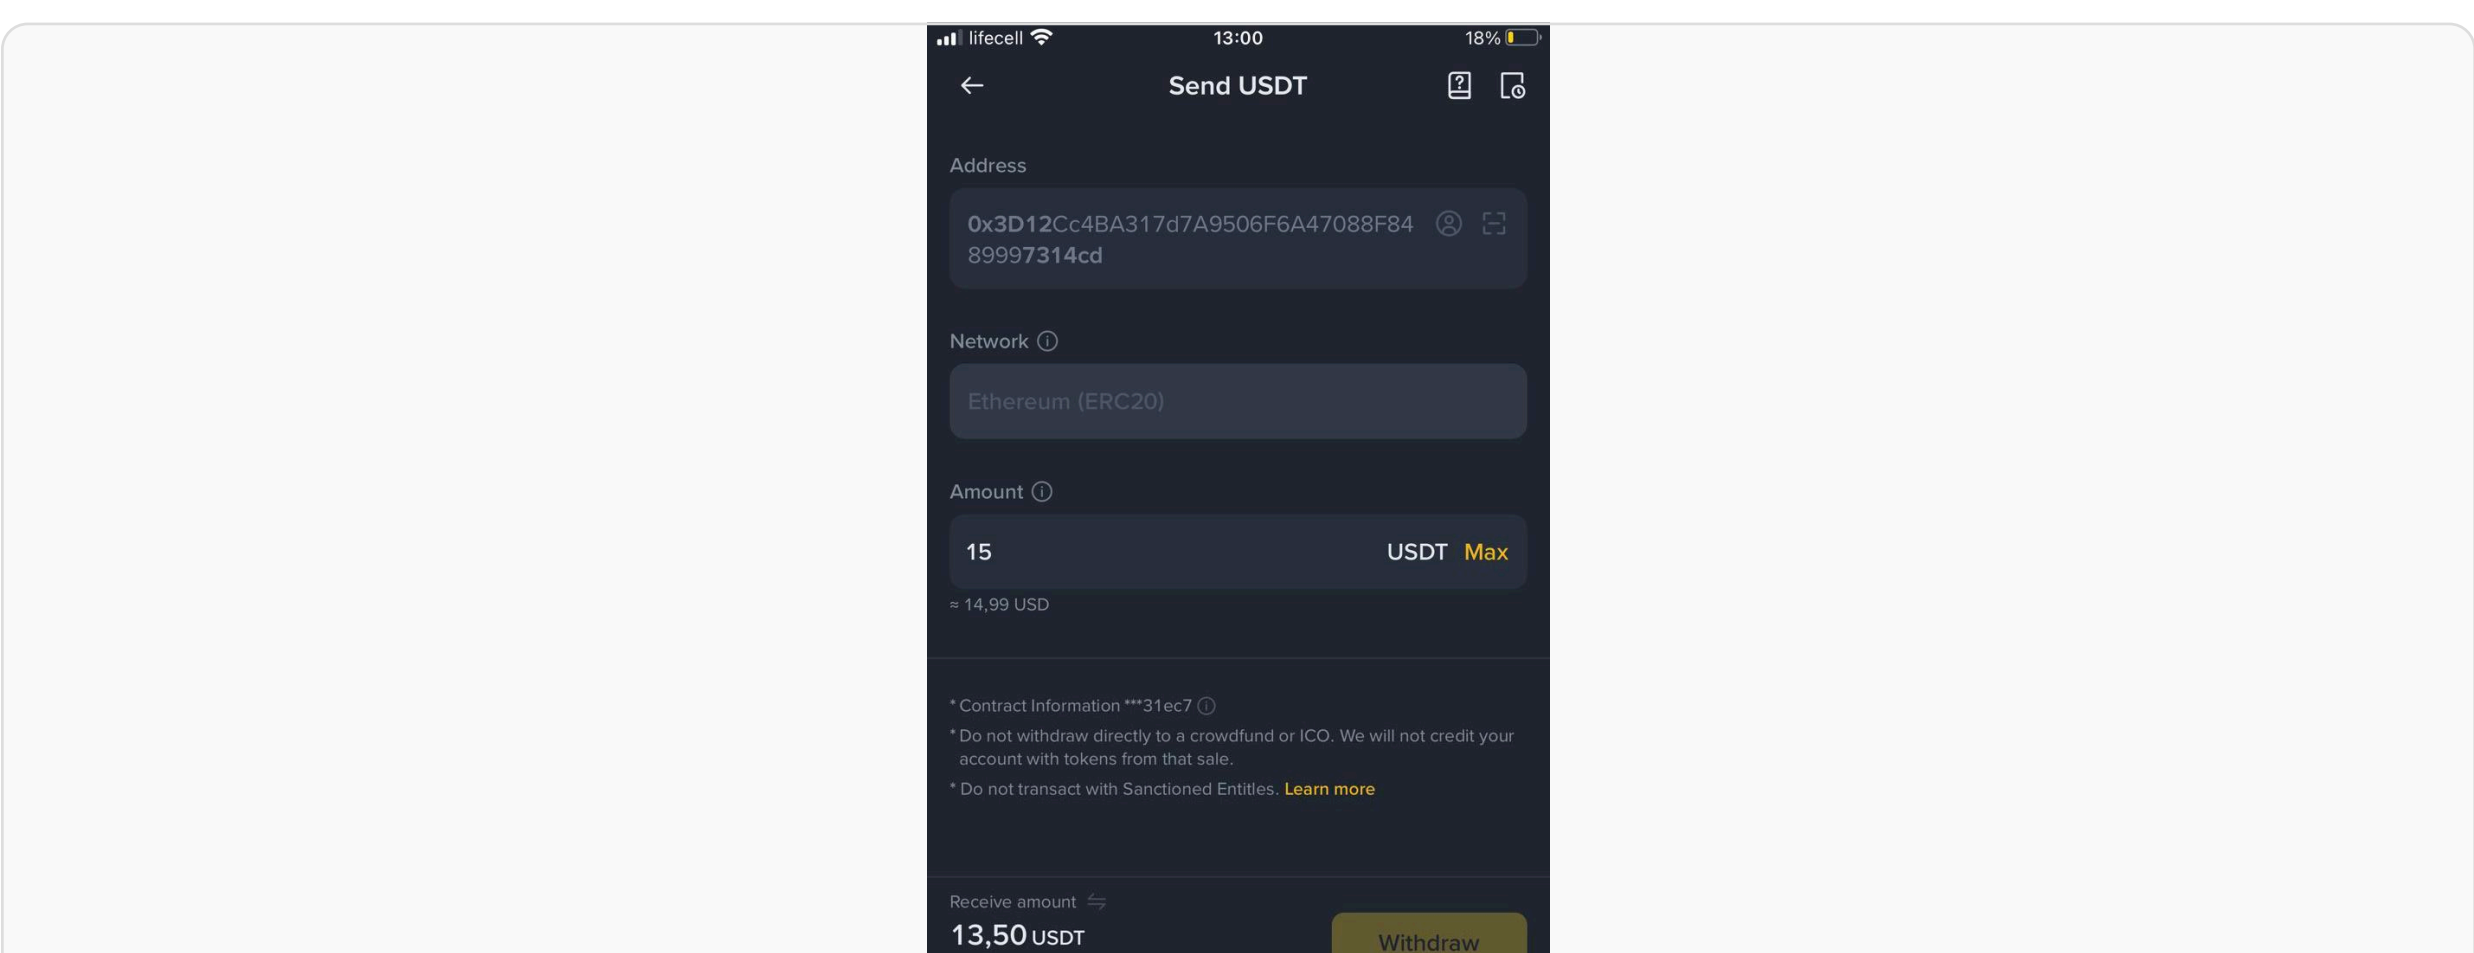

## 6 Transfer USDC to Your Wallet

After the purchase is complete:

- Go to “**Wallet**” → “**Withdraw**”
- Select **USDC**
- Paste your **ERC-20 wallet address** (e.g., from MetaMask)
- Make sure **the network is set to Ethereum (ERC-20)**
- Enter the amount and confirm the transfer

✓ Done! Your USDC will arrive in your wallet within a few minutes (usually 2–10 min depending on network load).
